

PSA (Anons Sèvis Piblik):

Eliminasyon poupou ak kolera

(Disposal of Feces for Cholera PSA)

Haitian Creole:

Kolera kapab gaye lè nou poupou yon fason ki pa bon. Jete poupou nan yon latrin oswa nan yon twalèt. Si w pa genyen yon latrin oswa yon twalèt, poupou kote ki pa genyen okenn sous dlo epi antere poupou ou. Si ou fouye yon twou pwovizwa pou twalèt, fè li omwen yon demi mèt nan pwofondè epi sou yon distans 20 mèt omwen ak nempòt sous dlo. Lave men ou ak savon avèk dlo pwòp apre ou fin poupou.

English:

Cholera can be spread by poor toilet practices. Dispose of your feces in a latrine or toilet. If you don't have a latrine or toilet, defecate away from any water sources and then bury your feces. If you dig a temporary pit toilet, make it at least half a meter deep and at least 20 meters away from any water source. Wash hands with soap and safe water after defecating.
